## SMART Parking

### SMART Parking – the hi-tech solution to paid parking

Demand for parking space has increasingly become a problem in many countries due to the increase in car ownership. One solution has been to introduce paid parking zones in order to collect money from motorists who wish to park in a particular area for a specific time.

But this can cause problems. Not only does the parking attendant have to manually check all the displayed parking tickets, the motorist may forget to renew expired tickets and thus face a fine. Naturally, procedures like this are time consuming and financially costly for both parties.

The SMART Parking solution from Amricon is a great new innovation to help solve this increasing problem.

### What is SMART Parking?

Amricon's SMART Parking Solution contains a pre-paid pager device and display unit which can be placed anywhere in the vehicle. The pager device contains a storage chip that has secure information about the vehicle and tracks payment transactions.

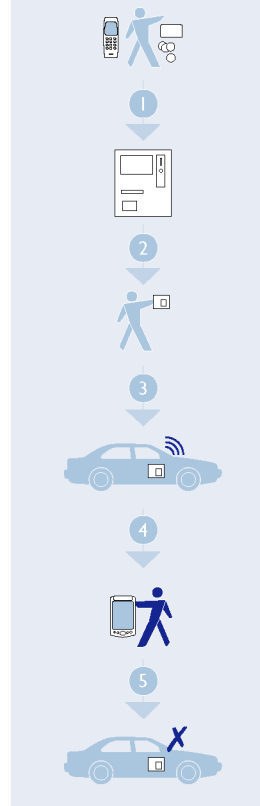

### How SMART Parking works

1. The SMART Parking Solution user loads a pre-paid pager with an amount of money either by mobile phone or paying cash or credit at participating outlets.
2. The user will turn the pre-paid pager device on when they park at paid parking spots.
3. The pre-paid pager in the vehicle will start deducting fees as specified in the zone where the car is parked.
4. The parking inspector can verify the paid period remotely through a handheld device without having direct line of vision to the device.
5. The user then switches the device off when they return to the car.

### It's SMART. It's reliable. It's easy.

The SMART Parking solution from Amricon is good news for the motorist and good news for the inspection authority. The system is reliable and easy to use. It saves the motorist and the inspecting authority a great deal of time, money and effort.
